

ONLY THE FINEST
SPRINGS & COILS

Taylor  Spring

Taylor Spring is a dynamic company rich in history. For all of our 50-plus years of manufacturing the finest springs and coils, we have been family owned and operated. We don't just come to work, do our job and go home. We live and breathe the business, and it shows. From your first call to us, to receiving your product on time, you'll know you're working with people you can trust with your business.

Craftsmanship

Our expert craftsmanship, ISO 9001:2000 certification and the most advanced CNC equipment, guarantees you'll get the spring or coil you need. And your order can be from a one piece prototype to hundreds of thousands.

Production Features

We take pride in having and maintaining the most advanced spring manufacturing machines. They allow us to quickly and easily set-up and manufacture complex shapes, coil bodies and end configurations. We also have in-line heat treating ovens that significantly improve production efficiency. But perhaps the best feature of our high-tech equipment is the money-saving feature. Even though we can set-up and manufacture the spring you need faster and more precisely, we don't add excessive mark-ups for these services. Instead, we keep our prices extremely competitive and allow you to save money.

Quality Control

To ensure you receive springs or coils that perform exactly as required, our Quality Assurance team gets involved at the very beginning to review all specifications and develop an accurate quote. It's then on to First Article Piece Manufacturing and First Article Piece Inspection. We insist on using a computerized video microscope during inspection. This device allows our inspector to go beyond a typical inspection and view the piece in minute detail. Adjustments are made, as needed, and the process is repeated until the piece is perfect.

Out on the production floor, our In-Process inspectors continually check all materials, equipment and products. A final inspection is made when products are packaged and shipped.

Materials

Most often, we produce springs from stainless steel, music and oil tempered wire. Our coils are most often produced using bare, tinned and magnet wire. However, more exotic materials are available too. It simply depends on what you need.

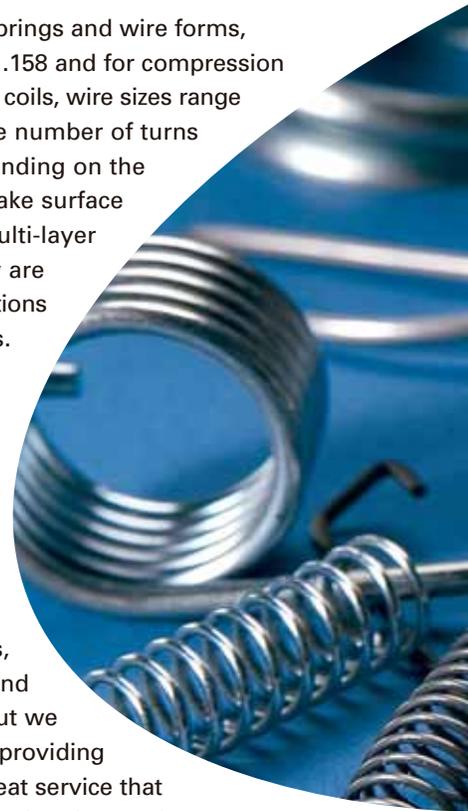

For torsion springs, extension springs and wire forms, wire size capabilities are .008 to .158 and for compression springs they are .008 to .200. For coils, wire sizes range from 6 AWG to 30 AWG and the number of turns can range from one to 70, depending on the configuration of the coil. We make surface mount, thru-hole mount and multi-layer coils. And like our springs, they are made to meet exacting specifications and performance requirements.

Secondary Department

In our Secondary Department, we finish the pieces as your requirements determine. Naturally, we can insert plastic, powder-iron and ferrite cores into air wound coils; add custom formed material onto coils leads, grind, color-code, polish, plate and apply anti-oxidation coatings. But we also go another step farther, by providing custom assembly work. It's a great service that helps cut down on overall production time and costs.

Tracking Your Order

Stay up-to-date on your order with our online Production Tracking System. Our database is updated every 30 minutes, allowing you to check your inventory, production and shipping status.

Packaging

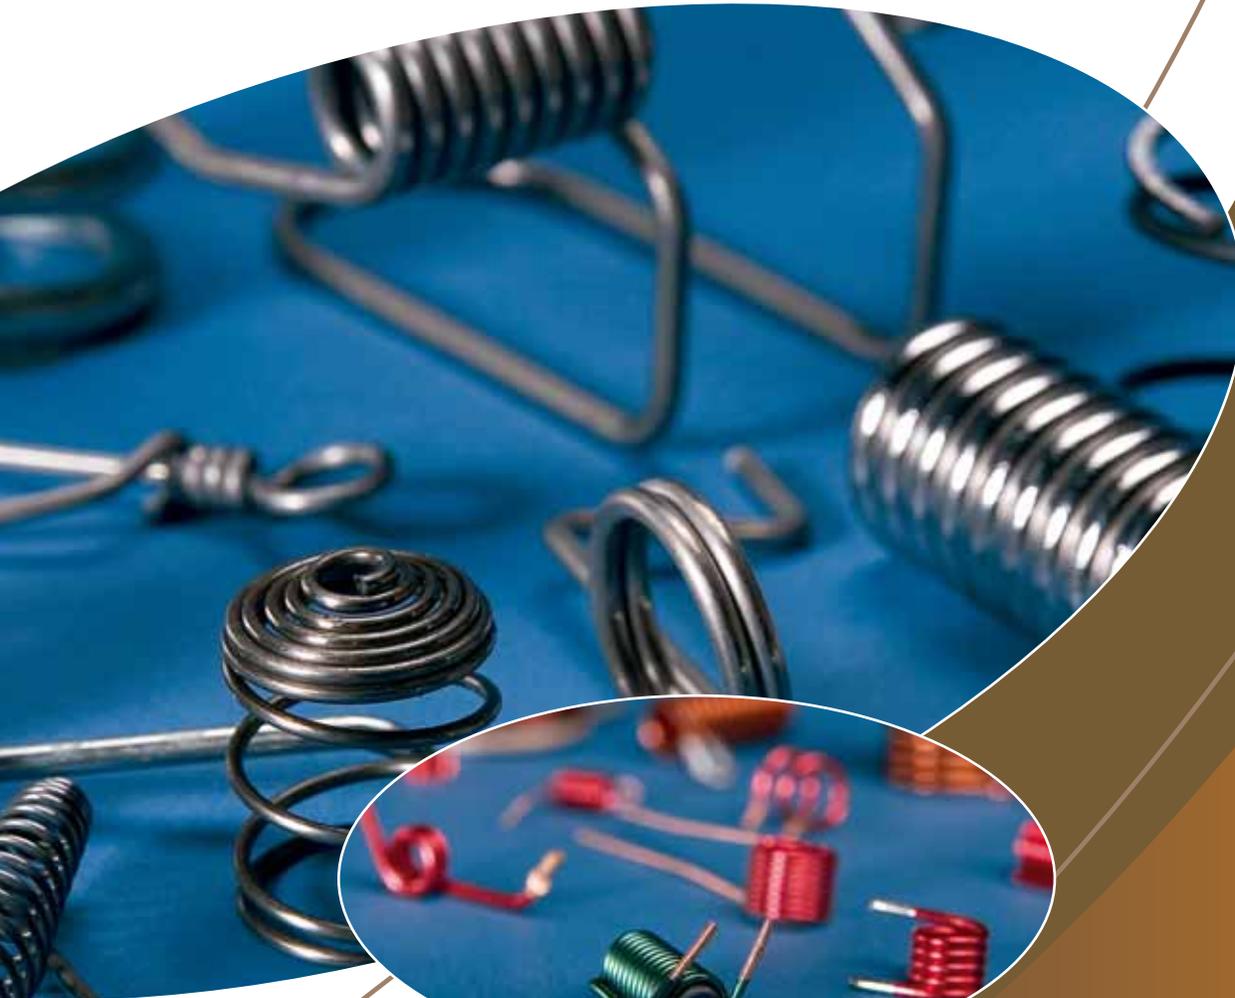

Our packaging can be as customized as our spring and coil work. Products can arrive packaged individually, in small quantity bulk or in large quantity bulk. We can even package products in ways that are especially suitable for automatic loading and assembly. And of course, we can ship to any location in the world.

Inventory Stocking

To ensure you always have the product you need, when you need it, we offer the Taylor Spring Stocking Program. In this customized program, we keep a stock of the product or products you want for scheduled deliveries. So you can easily manage inventory, free-up warehouse space and eliminate costly downtime due to product shortages. It's a great way to create peace of mind too.

Call Us

Our knowledgeable and dedicated Customer Service Staff is ready to answer your questions, handle special requests, arrange for design assistance or do their best to get a cost quote back to you in less than 24-hours. So call Taylor Spring today and discover how everything, from the service we deliver to the products we manufacture, can be Taylored to your needs.

Compression Springs

.008 to .200

Torsion Springs

.008 to .158

Compression Grounded End Springs

.008 to .200

Wire Forms

.008 to .158

Extension Springs

.008 to .158
